When Quality, Service & Price are Important!

Website Download

Dear Potential Member,

Thank you, for your enquiry. I hope this information is of help to you. Please do not hesitate to contact me if I can be of any further assistance.

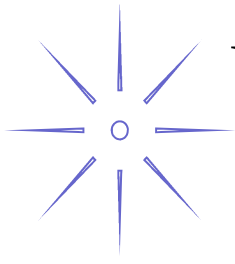

Looking forward to having you as one of our valued customers soon.

Regards,

The Valley Fresh Team

How we make it easy for you!

- We have a HUGE range of fresh flowers arriving daily from local and interstate growers
- We carry all the basic Florist Sundries lines at the right price.
- Wedding Orders a Speciality. If we can't get it then nobody can!
- We are Number ONE in service, you will be surprised!
- We are Open 6 days a week for your convenience
Monday to Friday 7.30am – 5.30pm
Saturday 9.00am – 12 noon
- Friendly and co operative staff to assist you at all times.
- Easy communication with multiple telephone lines and mobiles, dedicated fax machine and email address.
- Country overnight delivery service with orders taken as late as 4pm for next day delivery as early as possible.
- Local customers enjoy morning deliveries and afternoon deliveries if needed.
- Best Quality Flowers and great value for money with “MONEY BACK GUARENTEE” if you are not satisfied.
- Easy account payment options Cash, Cheque, Credit Card, Direct Deposit.
- Annual Open Days are held where we present the worlds Leading Florists as well as regular “hands on” Advanced Design Workshops. See our Webpage for more details.
- Reliable suppliers 52 weeks a year established since 1990. Over 61 combined years of experience in the wholesale market.
- Over 250 satisfied customers

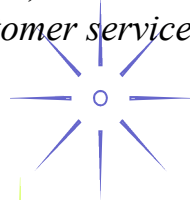

Valley Fresh Flowers

Wholesale Testimonials

“As the Manager of Bay Bouquets, I would highly recommend Valley Fresh Flowers for their quality, reliability and customer service. I have dealt with them for over two years and will happily continue to do so.”

Kathryn Ann Ford, Bay Bouquets

“I have been a customer of Valley Fresh Flowers for 16 years. I have always been treated with great respect and Adrian and all his staff have always bent over backwards to get the product that I require. Service is excellent, quality of flowers is superb. I will always remain a customer of Valley Fresh Flowers.”

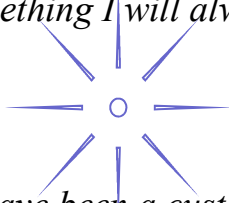

Ronnie Oehme, Ronnie's Flower Shop

“I have been a customer of Valley Fresh Flowers for the past 5 years. Their friendly and helpful customer service and their flowers are of the highest quality. I would recommend Valley Fresh to anyone who insists on quality.”

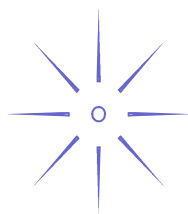

Heather Auld, Country Fair Flowers & Beauty

“I have been doing floristry for 35 years and dealt with many growers and wholesalers, as nice and as helpful as they were, no one compares to Valley Fresh Flowers. The quality of their flowers and professionalism of Adrian and his staff is outstanding and is always very supportive though good and difficult times. Natalie the Office Manager and Wedding Co-ordinator in wholesale goes to every level to ensure that you get all the special wedding flowers that you require. The delivery drivers are very helpful and will always help carry buckets into the coolroom. All staff are most helpful in assisting with any flower requirements. Not only am I involved with Valley Fresh Flowers in business dealings, their friendship is something I will always treasure.”

Sharlene Pickering, Flowers by Sharlene

“I have been a customer of Valley Fresh Flowers for the past 4 years. I have found them to be most helpful with both stock flowers and wedding flowers.”

Tony Wright, Anthony's Flowers

CONDITIONS OF SALE

In the event that this credit application is approved, I hereby agree with the supplier to abide by all the following terms and conditions:

1. That notwithstanding any changes in my trading structure, I remain personally liable for all goods and services requested by my agents or me.
2. To pay for all goods sold and delivered or services provided in accordance with the terms of the invoice (payment) or within such other period or time as may be notified to me from time to time by the supplier
3. in the event any sequestration order is made affecting my property or I give any authority to a trustee under section 88 of the bankruptcy act or I commit any act of bankruptcy or any petition for winding up, or I am placed in receivership, or official manager is appointed, or I cease to trade or carry on my business in the usual manner, any amount then due by me shall become payable immediately or the goods returned if so desired by the supplier.
4. That I have been supplied with a copy of the conditions of sale current at the date hereof.
5. That all goods are made and services provided to me by the supplier only upon the terms contained in the supplier's conditions of sale. Until altered conditions of sale are notified to me, I agree that the current conditions of sale shall continue to apply.
6. That a certificate supplied by the manager, accountant, secretary, credit manager or credit officer for the time being of the supplier in respect of any sale or delivery or price of any goods or the provision or price of any services by the supplier or the amount due owing or payable from time to time to the supplier in respect of the sale of goods, the provision of services or any account what so ever as at the date or dates set out in such certificates shall in all courts and at all times be prima facie evidence of the facts herein stated. That I will pay to the supplier interest in respects of any amounts as may from time to time be overdue calculated at the rate of interest applicable to bank overdrafts and indemnify the supplier in respect of any taxes or stamp duties which may become payable by reason of or subsequent to any default in making payment in accordance with the terms of payment applicable from time to time.
7. (a) Ownership of the goods contained in each delivery ('the goods') shall remain with the supplier which reserves the right to dispose of the goods until payment has been received in full or until such time as I sell the goods to my customers by way of bona fide sales at full value.
 (b) Until payment in full for the goods has been received by the supplier, I shall hold the goods for the seller, provided however, that I may, in the ordinary course of my business, use any of the goods to make up other products or sell any of the goods to make up other products or sell any of the goods on condition that should the supplier so require I will assign to the supplier my rights in respect of sale price thereof.
 (c) I hereby acknowledge that until payment in full for the goods has been received by the supplier I am under no obligation to the supplier to account to the seller for the proceeds of the sale of the goods sold by me in the normal course of my business.
 (d) If any of the goods are on sold I agree to place the proceeds of sale for the goods into a bank account conducted in my name and acknowledge that I will not withdraw any of those monies until payment in full for the goods has been received by the supplier.
8. That I will indemnify the supplier against and agree to reimburse it for any expenses it may incur in recovering or attempting to recover payment from me of the amount, which may from time to time be overdue. These costs include court costs, solicitors, debt collection agency commissions and fees.
9. That the supplier may at any time and from time to time alter it's conditions of sale or the terms of payment, and such altered conditions or terms shall apply in respect of all transactions taking place after notification to me of such altered conditions of sale or terms of payment.
10. That the supplier may at any time or from time to time without assigning any reason therefore refuse to extend any further credit to me and that it's approval to me of this application does not require the supplier to extend to me any particular amount of credit.
11. That where there is more than one customer, each customer shall be jointly and severally liable hereunder and in this application and all terms hereof the singular shall be read and construed as being the plural.

Treatment of Cut Flowers

Rapid cooling of packaged cut flowers and foliage reduces the time they would otherwise endure higher temperatures and therefore helps to prolong quality and vase life.

Freshly cut flowers and foliage are highly perishable and deteriorate quickly when exposed to unfavourable environmental conditions such as adverse temperatures. Any technology, which ensures that cut flowers reach the required low temperatures as soon as possible, and also, maintains these optimal temperatures, is of considerable benefit to people involved in their production and sale. Rapid cooling is therefore the vital first step in the cool chain of cut flowers.

Why Cool Flowers?

Temperature is the major factor affecting the storage and vase life of flowers. This is through its influence on the respiration rate of the flowers, and their response to ethylene, moisture loss and physical damage. Cooling is also necessary to reduce other metabolic activity, and to slow the rate of opening of the flowers.

The temperature of flowers and foliage at harvest is normally close to that of the ambient air. At this temperature, respiration activity is very high, and storage/vase life will be very short. Therefore it is always best to harvest flowers during the cooler parts of the day, either early morning or late afternoon. As a general rule, the faster field heat is removed from the flowers, the longer will be their storage potential.

Respiration:

Temperature directly affects the respiration rates of cut flowers and foliage. Respiration is a complex process involving many enzymatic reactions. The rates of these reactions, within the normal physiological temperature range, increases exponentially with increase in temperature. In fact, between 0 and 20°C, respiratory activity of carnations can increase 25 fold (Reid & Kofranek, 1980). Below or above the limits of this range (which will be different depending on particular flower crop), activity falls off due to a decline in enzyme activity.

High respiratory activity not only generates further heat around the product, but also uses up stored reserves within the flowers and foliage. This is particularly important for certain *Protea* and *Leucadendron* species that develop leaf blackening. This is thought to be a result of rapid depletion of stored carbohydrates from the leaves due to the high respiratory demand of the inflorescences at room temperature. Therefore, lowering product temperatures will decrease respiratory activity, which in turn will slow down the use of stored reserves and the generation of heat.

Ethylene:

Ethylene gas is a pollutant generated naturally by all vegetation, especially that which is cut and/or decaying, ripening fruit and vegetables, and some senescing flowers. It is also produced from coal gas, petroleum gas, and in exhaust fumes of internal combustion engines, such as those used in some forklifts, heating systems, etc.

Ethylene reduces the longevity of some flowers and foliage by causing rapid wilting of petals (e.g. carnations), shedding or shattering of petals (e.g. snapdragons, delphiniums), or other changes to petal tissues, such as loss or change of colour (e.g. orchids). Therefore, flowers which are sensitive to ethylene should not be held in the same cool store as ethylene-producing fruit, vegetables or foliage, or be exposed to exhaust fumes .

Low temperatures can reduce both the rate of ethylene production and the sensitivity of flowers to it. For instance, carnations stored at 0°C would need to be exposed to higher ethylene concentrations for a longer duration before petal in-rolling resulted, whereas a shorter exposure and/or a lower concentration of ethylene at 30°C may be sufficient to cause damage.

Moisture loss:

Flowers can be considered essentially as fancy packages of water. The water has been costly to put into the flowers during production, and any water loss resulting in wilting directly affects returns to the grower. The difference between the humidity of the produce and the humidity of the air (the vapour pressure difference or deficit - VPD) is the driving force behind moisture loss. Even if saturated cool air is used to cool flowers, as long as the flowers remain warmer than the air, they will continue to lose water. Therefore it is important to cool flowers and foliage quickly to minimise the period when a VPD exists.

Both high relative humidity (RH) and low temperature are important in reducing moisture loss from foliage. At 0°C and 80% RH, moisture loss is twice that at 0°C and 90% RH. At identical RH, moisture loss can be halved through lowering the temperature by 10°C. Maintenance of optimum flower temperature is therefore one way to reduce water loss and prevent wilting.

Airflow over the product is also important in determining the amount of moisture loss, especially for fragile products like flowers. Of course, a high airflow is required to ensure rapid removal of heat from the foliage, but its effects on moisture loss must also be considered. Packaging such as plastic sleeves that limit

the loss of moisture from the flowers, will reduce wilting, but may in turn decrease cooling rates and increase likelihood of rots.

When moist air is cooled, a point is reached at which the vapour pressure of water reaches the maximum for that temperature, and the water will then condense onto the surfaces of the produce or packaging. This temperature is called the dewpoint temperature. Condensation can lead to development of rots and accelerated warming of the flowers, and weakening of cardboard packaging. Excessive fluctuations in cool room temperature around the dew point temperature will cause condensation to occur and should therefore be avoided.

Physical damage:

Bruises and wounds to cut flowers and foliage often cause increased ethylene production, which may increase respiration and heat production, and increase moisture loss. Prompt cooling to low temperatures slows these processes, reducing the effects of physical damage. The best options of course are to ensure that systems are in place throughout the handling chain to reduce the likelihood of damage, and to ensure that no damaged product is packed.

Harvesting during the hotter times of the day can lead to many quality problems, especially wilting of the flowers, accelerated opening and senescence, and damage to the buds, e.g. Oriental lilies can develop brown depressions on the top surface of the buds during storage if harvested during hot weather and placed immediately into the cool store.

Chilling or freezing damage:

The optimum storage temperature for most flowers lies between 0° and 7°C, depending on the particular crop. The air temperatures in the cool store should be checked to ensure the thermostat has been correctly set, as temperatures below -1 to -0.5°C may freeze or discolour the flowers, or may inhibit later bud opening. Many semi-tropical and tropical flowers, and some temperate crops, will not require cooling to these low temperatures, and may in fact store better at 10-12°C, making it essential that growers identify the optimum storage temperature for each of their crops. Holding these flowers at too low temperatures may cause deterioration through chilling injury (e.g. heliconias, orchids, nerines). This may result in poor opening of the buds after storage, and rapid loss of quality, such as discolouration of the flower parts, water soaking of the petals, and flower collapse.
